Hugh Flax, DDS, AAACD, FOCO

Smile Design for the Dental Team

Case acceptance and treatment success are highly dependent on team members understanding smile design and building confidence for patients to know they are getting the best care available.

- Discover the key secrets to helping patients have the smile they've always wanted.
- Understand how to help your patients and practice avoid failures in treatment.
- Four critical steps of veneer and esthetic cases.
- Updated minimally invasive techniques in posterior composites.
- Discover how laser technology can make your cases aesthetically beautiful and biologically healthy.

Edgar Luna, DMD

From Simple to Complex, Everyone Deserves a Diamond Smile!

It's no surprise when I say that everyone wants to look and feel their very best. Our challenge, as dentists, is how do we take an average smile and turn it into an absolutely beautiful smile? In this course you will learn how to consistently obtain beautiful results no matter how challenging the case may be.

From the straight forward 10 unit veneer case, to the full mouth rehabilitation with lost vertical dimension case, we will show you step-by-step how to consistently obtain beautiful results. Some of the topics that will be discussed include: smile design, prep design, material, cements and the 2 major thoughts on occlusion.

Sundeep Rawal, DMD

Digitally Driven Dentistry: Utilizing Advancements in Science and Technology to Deliver Restorative Excellence

An in-depth look at using CAD/CAM technology in certain aspects of daily dentistry. From treatment planning to design of definitive restorations, computers are changing the processes used to treat patients. Traditional ways of fabrication and casting metal alloys are being replaced with unique technologies that allow for the virtual design and milling of restorations.

- Discuss a range of different clinical situations including single-tooth solutions and the restoration of multiple teeth with custom CAD/CAM manufactured frameworks with dental implants.
- Learn how these technologies are making treatment more efficient and less time-consuming, especially for complex full-arch implant-supported fixed and removable therapies.
- Learn a detailed step-by-step approach to utilizing CAD/CAM technologies demonstrating the advantages of technology in daily dentistry.
- Learn why and how therapy may fail or be compromised and more importantly, how to avoid these issues.
